

My Top 5 Data Course Recommendations

Where to go to learn the good stuff

Matt Mike

With so many options,
knowing where to go for
data courses can be
overwhelming.

Many people end up
defaulting to Googles
course (not a bad option,
just not the only option).

Here are my **top 5**
recommendations for
data course platforms,
(in no particular order).

1) Maven Analytics

Maven has it all and is widely respected in the data community.

- Strong variety of great courses.
- Projects - Data Playground.
- Portfolio - Maven Showcase.
- In-depth bootcamp.
- Leaders with an actual LinkedIn presence.

2) Udemy

One of the best places to go for skill-specific courses.

- Monthly subscription or buy a single course and own it forever.
- Massive variety of courses across every subject.

3) DataCamp

A subscription based platform with in-depth courses and tracks for key data tools.

- Their Power BI and Tableau courses are especially great and use a built-in interface.

4) Youtube

Technically not "courses," but Youtube has scores of material from powerhouses like **Alex the Analyst, Leila Gharani, Kevin Stratvert, and Guy in a Cube.**

- 100% free material.
- Alex the Analyst has a "bootcamp" video playlist.

5) LinkedIn Learning

Tons of material built into the platform you're using right now to read this.

- Courses from thought leaders you follow on the platform daily.
- Wide variety of material and unique content.

Honorable Mentions

Coursera

- Google course provides a good introduction to core skills.
- Recently added advanced courses.

GoSkills

- Great Excel courses. Most other data courses are introductory.

Thanks for reading!

Hope this list helps you jumpstart or re-ignite your data career journey!
